BELTSVILLE BRANCH LIBRARY

U.S. DEPARTMENT OF AGRICULTURE

NEWSLETTER

No. 1

211-212 CENTER BLDG.
TELEPHONE 50 AND 104

DECEMBER 1941

The Beltsville Branch of the U.S. Department of Agriculture Library has now been in operation for about six months, and in this and other newsletters which will be issued occasionally, the purposes and policies of the branch library will be explained.

This library does not propose to assemble a large collection of books. Its purpose rather is to serve as a super-index guide to the U.S. Dept. of Agriculture's collection in Washington, as well as a distribution center of library material which is continuously being sent from Washington to Beltsville. Such books and bound volumes as are used extensively at Beltsville will be kept here, if possible, but such volumes as are found to be "deadheads" on the shelves will be returned to the central collection in Washington.

142
Abstract and index journals rank first in importance here. Chemical Abstracts, Biological Abstracts, Nutrition Abstracts, Quarterly Cumulative Index Medicus, Animal Breeding Abstracts, Industrial Arts Index, Agricultural Index, and Readers Guide to Literature are kept up-to-date and bound regularly. The library has a complete set of all the Department's printed publications, from the beginning of each series to the present. Beginning with this year, a collection of all State experiment station bulletins, except those dealing with economic and sociological subjects, will be maintained. There is a bound set of the Index to the Surgeon General's Library. A fairly complete collection of the annual catalogs of the most important colleges and universities is kept up to date.

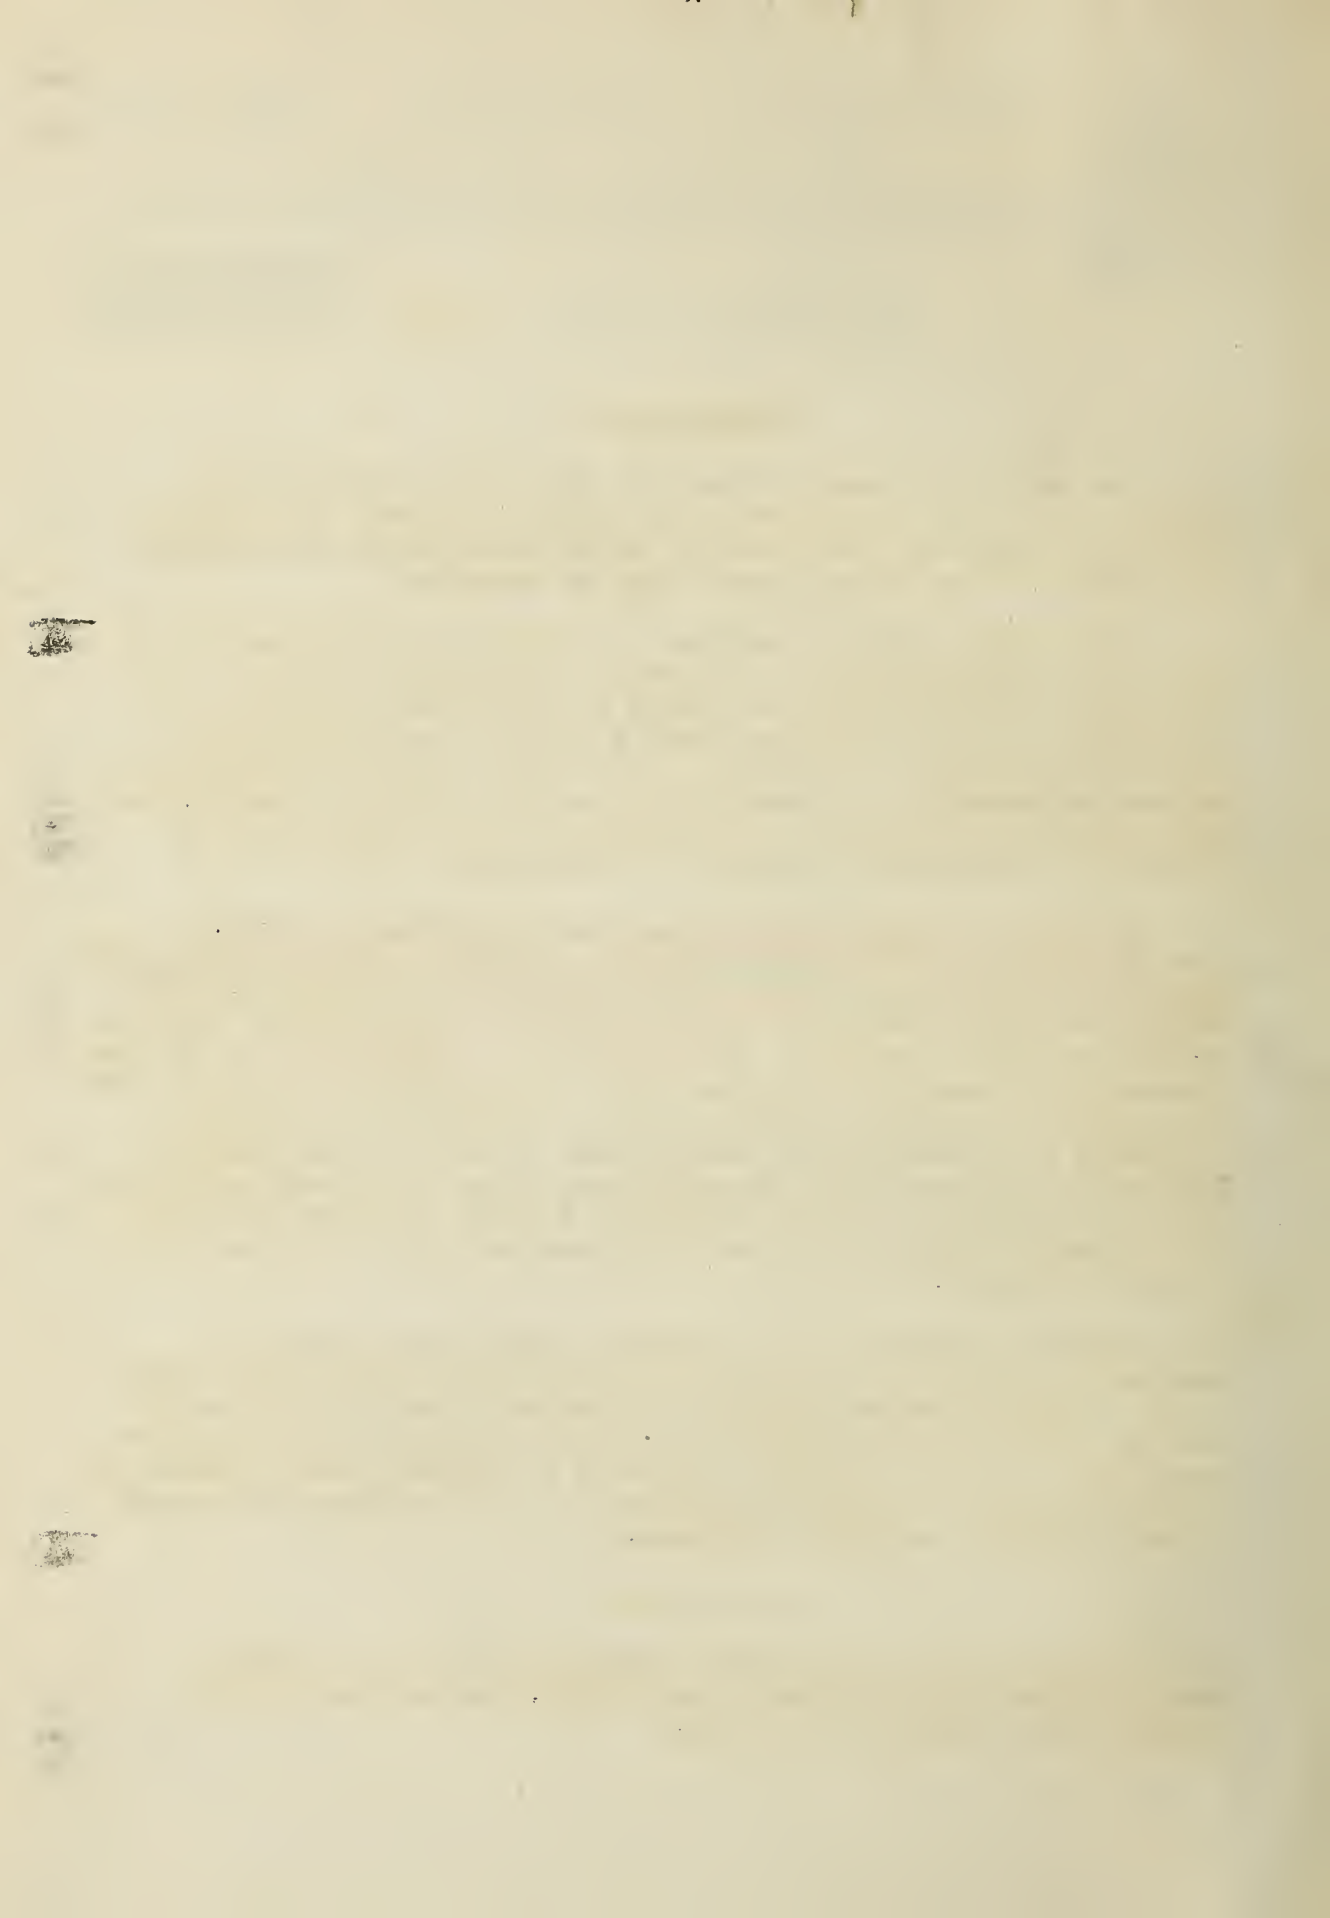

Since the opening of the Beltsville Branch, index cards to publications added to the Washington catalog have likewise been added to the Beltsville Branch, provided the subjects have been related in some way to the various fields of research in progress at this center. Therefore, it will be possible henceforth to determine what material is available in the Department Library on any of the subjects of interest to the Beltsville research scientists.

On the reverse side of this newsletter is a list of titles recently added to the Beltsville collection. Any of these may be borrowed for a period of two weeks.

BELTSVILLE BRANCH LIBRARY

NEWSLETTER No. 2

111-12 Center Bldg.,
Telephone 50 and 104

January 1942

As a result of increased demands on the library for the purchase of new books, the funds allotted are almost exhausted, and until the end of this fiscal year, only emergency purchases will be made.

No more library books can be assigned to the various offices for filing.

As Secretary Wickard has already pointed out in a letter to members of the Dept. of Agriculture: "Some of our work will change. Some lines of activity will have to be suspended, and other lines will have to be augmented." These changes will be reflected in the library's future acquisitions. Henceforth, only books essential to the changing demands of the scientific workers at Beltsville will be added to this library.

We can no longer buy extra copies of books. Therefore it is important that each borrower consider that he is only one of about 1400 persons served by this branch library, and every day that he holds a book over his allotted loan period, he is probably depriving some one else of its use. Loan periods are 30 days and 15 days, according to the demand for the particular book. If a book can be finished in a day or two, it should be returned promptly to the library and not allowed to lie unused on a desk. A book borrower should never leave books at home, or in his office while he is away on leave or on a field trip.

Because of the wide range of subjects covered at this research station, we can at best obtain only a few of the most outstanding publications for permanent use. A scientist recommending a book for purchase should consider a number of points, such as whether or not it is likely to be of interest to persons other than himself, whether or not it is written by a leader or leaders in the subject covered, whether or not it is likely to be an enduring book.

Heretofore, the library has automatically circulated a few books to persons likely to be interested in them. This practice is being discontinued, and no more books will be loaned unless formally requested. A list of principal accessions of the Department Library in Washington is published monthly in Agricultural Library Notes which will be sent regularly to any Department employee upon request. Books which have been purchased for the Beltsville Library will be listed regularly in this newsletter.

FEBRUARY 1942

The library would like to receive reprints of articles published by Beltsville research workers in publications outside the Dept. of Agriculture.. In case an article appears in a periodical and a reprint is not available, we would appreciate a notification of its publication---the name of the author, the title, name of publication, volume, date, and page numbers.

Such reprints or notifications of publication as are received will be recorded in the library catalog, and it is hoped that eventually we will have a complete record of the scientific publications resulting from research at Beltsville.

BELTSVILLE BRANCH LIBRARY

U.S. DEPARTMENT OF AGRICULTURE

NEWSLETTER

No. 4

211-212 CENTER BLDG.
TELEPHONE 50 AND 104

MARCH 1942

No complete bibliography of scientific publications resulting from research at Beltsville Research Center has yet been compiled, but if such a compilation is ever undertaken, some surprising facts may be revealed.

A cursory examination of the library's current periodical files in such subjects as veterinary science, biological chemistry, nutrition, home economics, animal husbandry, and plant science, will show an unusually large number of papers from Beltsville.

To select a few titles at random: Journal of Nutrition, Industrial and Engineering Chemistry, American Veterinary Medical Association Journal, Food Research, Poultry Science, rarely appear without at least one report by a Beltsville author on some phase of the agricultural research in progress here.

In addition, B.R.C. scientists are often called upon to contribute occasional pieces to periodicals of a more specialized type. Recently articles appeared in Refrigerating Engineering, Modern Hospital, Cotton, Soap, Quick Frozen Foods, American Dyestuffs Reporter. Dozens of other titles could be included.

The point we wish to make is this: Beltsville Research Center has become within the past two years one of the major sources of scientific literature in the country.

And this frequency of publication in periodicals which demand the highest standards of scientific workmanship is a fair indication of the importance of Beltsville's contribution to agricultural progress.

In another newsletter we will point out how these discoveries, which reach only a limited number of readers, comparatively, in the technical publications, are later transmitted through more "popular" periodicals to millions of American farmers and consumers.

BELTSVILLE BRANCH LIBRARY

U.S. DEPARTMENT OF AGRICULTURE

NEWSLETTER

No. 5

211-212 CENTER BLDG.
TELEPHONE 50 AND 104

APRIL 1942

For the past several days and for some weeks yet, the book collections of the various bureau libraries of the Department of Agriculture in Washington have been, or will be, in a state of transition to the Department Library. This consolidation of library services is in accordance with Executive Order 9069, which transferred all bureau library units, with their personnel, property and records to the Main Library.

Naturally, the normal routine of book and periodical loans has been affected by this temporary readjustment, but a considerable improvement over the old system of loans is expected to follow shortly.

As for Beltsville, library services here also are to be consolidated. The central index catalog of books and periodicals will be broadened to include the material filed in the Fertilizer Research division, Horticulture division, and in other units at the Center. Periodicals circulated from the Department Library will all be routed through the Beltsville Branch Library. And incidentally, from Washington we are obtaining several additional bound sets of publications which have been needed here for some time.

As quickly as the mechanics of indexing can be completed, the Beltsville Branch Library should be able to supply the major portion of the Research Center's library requests. And such requests as we cannot supply should, within a few weeks, be moving much more rapidly than formerly from the Washington shelves to the borrowers at Beltsville.

The library now has a set of the more important publications of all the state agricultural experiment stations. These include annual reports, bulletins, circulars, etc., for each state. In most cases each series is complete from the beginning numbers.

The set was obtained from the Agricultural Economics Library, which was recently combined with the Main Library. All volumes are bound, and are available for loan to any of the agricultural workers at Beltsville.

-----o-----

In keeping with our policy of maintaining collections of the important index and abstract publications concerned with agricultural research, we have also just obtained sets of British Chemical Abstracts, Veterinary Bulletin, Index to the Literature of Food Investigation, and some additional volumes of Vocational Arts Index.

BELTSVILLE BRANCH LIBRARY

U.S. DEPARTMENT OF AGRICULTURE

NEWSLETTER No. 7

211-212 CENTER BLDG.
TELEPHONE 50 AND 104

JUNE 1942.

Now that library periodical circulation at Beltsville has been consolidated into one central desk, it is more important than ever that regular borrowers forward or return periodicals as quickly as possible. Although we have added extra copies of some of the more widely used journals, most of the foreign scientific publications can no longer be obtained in duplicate, either because of restrictions on paper or because of excessive costs.

We do NOT wish to keep the periodicals on our shelves. We would be quite happy if all the journals were in use at all times, up to the day when it becomes necessary to bind them. However, we would like to have the current issues immediately available when they are needed for reference. Unfortunately most of the users of the library know that it means to have to wait for long periods of time for badly needed current material. In too many cases our inability to deliver promptly is due to the failure of borrowers to forward or return periodicals on time.

You can do your part to improve the library service if you will follow the regulations in regard to regularly circulated periodicals. If for some reason a journal is needed longer than the allotted 3-day period, either notify the library, or return the journal with a request slip asking that it be sent back to you later.

We feel that special requests must take precedence over routine circulation, and if current periodicals are to be continued in regular circulation, there must be closer cooperation between borrowers and the library.

TELEPHONE 50 AND 104

No. 8

JULY 1942

Since July 1, the library's motorcycle delivery service has been combined with the regular mail service of the Center. This is in accordance with the Department's program to conserve rubber and gasoline, and also enables us to keep the service going at all times regardless of the weather, motorcycle breakdowns, or absence of the regular library messenger.

With the exception of a few buildings where we have previously made direct-to-desk deliveries, this change should have little effect on service. In many instances, we can now give twice-a-day deliveries where we formerly made one a day, and daily deliveries where we formerly made them on alternate days.

As library material in transit is now handled as government mail, it is necessary when returning borrowed books and periodicals to wrap or insert them in envelopes addressed plainly to Library, Center Building, Beltsville. This will not be necessary, however, if you happen to be located in Animal Disease Station, Nutrition Bldg. 72, or the North Laboratory. From these places, returns need not be wrapped, as they come direct by messenger or in special bags or boxes.

If in any case the delivery service appears to be unsatisfactory, please let us know, for it is to the common interest of the library and its users that loans come and go with a minimum of trouble and delay.

Should there be some special delivery or return problem within your building, one of the following persons will be glad to help you solve it:

Dairy: Miss Otte.
Zoology: Miss Doss.
Nutrition Bldg. 72: Mrs. Bullion.
Poultry Nutrition: Mrs. Stormont.
Poultry Biology: Miss Koehler.
Animal Disease Sta.: Mr. Fogarty.

North Laboratory: Mrs. Garby.
South Laboratory:
 (A.M.A.) Mrs. Kyle.
 (Entomol.) Mrs. Davidson.
Entomology (Bee Culture):
 Miss Coon.

U.S. DEPARTMENT OF AGRICULTURE

NEWSLETTER

No. 9

211-212 CENTER BLDG.
TELEPHONE 50 AND 104

AUGUST 1942

In a recent newsletter we pointed out how numerous are the articles by Beltsville research workers which appear regularly in the more important scientific and technical publications. A brief search through the journals which file in the Library will confirm our claim that this research station is one of the country's leading sources of scientific literature.

Now we would like to bring out the fact that Beltsville's work does not end up in scientific publications which are usually read only by other scientists and technicians. A glance through our current files of Country Gentleman, Successful Farming, Farm Journal, Wallace's Farmer, Rural New Yorker, Southern Planter, Progressive Farmer, or any of the forty-eight states' local farm papers will indicate how the research done here is channeled out to the people for whom it was originally planned--the American farmers. Really, it is a fascinating game to trace scientific facts as they move out from the technical journals to the popular periodicals.

Also we might mention here that Beltsville has been written up in recent months in such varied publications as American Magazine, Colliers', Readers' Digest, Life, Time, Goat World, Popular Mechanics, Guernsey Breeders Journal, La Hacienda, Flour & Feed, Gleanings, U.S. Egg & Poultry Magazine, Harpers' Bazaar, and Breeders' Gazette.

Some of the popular magazine articles tend to emphasize the odd and unusual, but on the whole they are accurate and informative. Thanks largely to some of our own writing scientists, who have taken the trouble to master the art of translating scientific language into plain and simple English, the popular magazines are beginning to carry Beltsville's discoveries directly to the library tables of millions of American farmers and consumers.

No. 10 211-212 CENTER BLDG.
TELEPHONE 50 AND 104

no-10

SEPTEMBER 1942

Changes in personnel at Beltsville have become so frequent now that it is almost impossible for the library to keep its lists of borrowers up-to-date. We send out current periodicals for circulation with several names attached, and quite often one or more of the persons has departed for service elsewhere. If we have not been notified of the changes, naturally we assume that the borrowers whose names have not been crossed off have failed to see the publications, and we send them out again. This of course does not help to keep the periodicals moving along to readers as rapidly as we'd like them to move.

Therefore we would appreciate being notified when we include on our circulation lists the names of persons who have left Beltsville.

Perhaps some of Beltsville's traveling scientists would be interested in the other field library branches which the Department of Agriculture has recently established. To date there are nine other such branches in the following cities: Little Rock (Ark), Upper Darby (Pa), Lincoln (Nebraska), Portland (Ore), Milwaukee, Atlanta, San Francisco, Ft. Worth, and Albuquerque.

Department employees who are traveling on official field trips or are temporarily assigned to points in or near these cities will find the branch libraries ready to serve them.

BELTSVILLE BRANCH LIBRARY

U.S. DEPARTMENT OF AGRICULTURE

November 1942

NEWSLETTER

211-212 CENTER BLDG.
TELEPHONE 50 AND 104

Miss Katharine Forsyth is in charge of the Beltsville Branch Library, succeeding Mr. D.A. Brown who was inducted into the army on September 23rd.

The Librarian of Congress has recently sent out a circular letter to all departments of the government stating the revision of their lending practice. Briefly, the policy now is:

1. No periodicals, bound or unbound, will be sent out unless there is a second copy actually present on their shelves.
2. All loans are on a 2 week basis, subject to prior recall if needed. For Beltsville, this means that an individual will be able to hold a publication for 10 days at the most, for 2 days must be allowed for transportation each way. We shall have to be very particular about this, for the letter also states that "no materials will thereafter be issued to any agency which has not returned borrowed materials within the two-weeks period or on prior recall..."

The Department library also has stated a new policy on the loan of publications in Library circular no. 1, Oct. 2, 1942. Copies of this were sent around to the various buildings for posting on bulletin boards. If anyone missed seeing it, the Beltsville library will be glad to furnish the information.

If anyone has kept old issues of the Newsletter and would like to clear his files, the library would be very glad to have them. We are particularly interested in numbers 1 to 8, Dec. 1942 to July 1942.
